

Lab 24 – Replit for Mobile Applications

Task 1: Environment Setup

Prompt:

1. Create a free account in Replit and open dashboard
2. Show me available templates for mobile app development
3. Help me choose between React Native, Flutter, or HTML5
4. Install required packages automatically in the environment
5. Explain each step in simple words for beginners

Code/Output:

Task 1 – Environment Setup

The app runs on Replit using **React + TypeScript + Vite** – a modern mobile-friendly web stack. All packages (Tailwind CSS, Wouter router, Lucide icons) are installed and configured automatically.

Explanation:

1. First, we create a Replit account and open a project
2. Then we select a template like HTML or React
3. The code checks if the environment is working
4. If output shows correctly, setup is successful

Task 2: Basic Mobile App

Prompt:

- Create a simple mobile app using HTML and JavaScript
- Add a title for the app at the top
- Add an input box to enter user name
- Add a button to show greeting message
- Display greeting dynamically when button is clicked

Code:

Code structure:

```
const [name, setName] = useState("");  
const [greeting, setGreeting] = useState("");  
  
function handleGreet() {  
  if (name.trim()) {  
    setGreeting(`Hello, ${name.trim()}!  
Welcome to Lab 24.`);  
  }  
}
```

Output:

What's your name?

Say Hello

Hello, rahul! Welcome to Lab 24.

Explanation:

1. User enters name in input box
2. Button click calls greet function
3. JavaScript reads the input value
4. Message is displayed dynamically

Task 3: Adding Features with AI Assistance

Prompt:

1. Add a navigation bar with Home, About, Contact
2. Create a simple registration form with name and email
3. Apply basic CSS styling to improve UI
4. Use AI to add comments in the code
5. Keep the design simple and mobile-friendly

Output:

User Registration

Register

Explanation:

1. Navigation bar helps move between pages
2. Form collects user details
3. CSS improves look and design
4. AI can add comments for understanding

Task 4: Testing on Mobile

Prompt:

1. Run the app in Replit preview mode
2. Check how app looks on mobile screen
3. Adjust layout for small screens
4. Fix alignment using simple CSS
5. Use AI suggestions to improve UI

Code/Output:

1 Explore Replit as a cloud-based IDE for building mobile applications.

2 Learn how to leverage AI-assisted coding inside Replit for faster development.

3 Understand how to design, test, and deploy simple mobile apps.

4 Gain experience in collaborative app development directly from the browser.

Technology Stack

React 18 TypeScript Vite Tailwind CSS Wouter Router

Lucide Icons Replit AI Framers Motion

Expected Outcomes

- ✓ Use Replit for mobile app development
- ✓ Build functional apps with UI, navigation, and interaction

Explanation:

1. CSS makes app responsive
2. Elements adjust for mobile screen

3. User can easily click buttons
4. AI helps fix UI issues quickly

Task 5:

Prompt:

1. Deploy the app using Replit hosting
2. Generate a public link for the app
3. Test the link on mobile browser
4. Share link with friends for testing
5. Explain deployment steps simply
